

case study

PRO-EVALUATE FLOWN IN TO AUDIT HEALTH & SAFETY PRACTISES

Leading airport parking provider chooses Pro-evaluate

Zero paperwork

Cost effective solution

Total flexibility and central control

PROBLEM

- A wide range of health and safety risks were prevalent at the Client's 24/7 parking sites
- A paper-based system meant that the auditing procedure effective but time consuming and was slow and laborious
- Hand-written notes were sometimes difficult to read and therefore audits had to be re-written
- The system was open to human error and therefore at risk of health and safety breaches

IMPLEMENTATION

- We worked with Airparks to develop Pro-evaluate as an improved solution and upgrade to the predecessor software solution, CHASE. This meant that Airparks were instrumental in the development of the product and were able to ensure their specific needs were met
- On-site training was provided to all Users
- Web-based solution, with no integration requirements
- The app was loaded onto hand-held devices for on-site audits and to record results straight into the solution

BENEFITS

- Responsive design for multi-device use
- Zero paperwork - all audits now carried out directly into the app
- Senior Managers now able to monitor and compare results for all sites on a centralised system
- Senior Managers can identify overdue audit activities and take appropriate action
- Automatic emails are sent to instruct auditors, ensuring timely audits
- Cost effective solution
- Unlimited question sets can be created

ABOUT AIRPARKS

Airparks provides a range of services for passenger's flying from a number of UK airports, including airport parking, airport hotels and professional services. Airparks provides quality airport parking to over 500,000 customers per year at various sites throughout the country and strive to provide the highest quality secured airport parking to their customers.
